Six ways this support agent was letting customers down

A sample audit of the AI support agent of NordHome, a fictional webshop shipping to the Netherlands, Belgium and Germany. Mistakes were planted in the simulated conversations to show what an audit finds.

60 conversations checked **34** with an agent mistake **6** failure types

Personal data removed in **EN · NL · DE**

	FAILURE TYPES, MOST COMMON FIRST	CONVERSATIONS
01	**Replies in English to Dutch customers** Fix: detect the customer's language and reply in it; add a Dutch example.	10
02	**Wrong return window: 14 days instead of 30** Fix: state the exact 30-day window in the prompt, with a worked example.	6
03	**Promises refunds and deliveries too fast** Fix: quote policy timeframes word for word; never promise dates.	6
04	**No human handoff after chargeback threats** Fix: any chargeback or bank-dispute mention triggers a handoff.	5
05	**Asks customers to send damaged items back** Fix: damaged items need only a photo, no return; add an example.	4
06	**Invents order status and tracking details** Fix: the agent can't see tracking; point to the tracking email.	3

EXAMPLE · FAILURE TYPE 01

Customer, in Dutch

“Hallo, ik wil graag een artikel retourneren dat ik vorige week heb gekregen. … `<EMAIL>`”

Agent

“Hello `<PERSON>`, thank you for reaching out to NordHome. I'm happy to help you with your return.”

Policy says: reply in the customer's language. Tags mark personal data removed before analysis.

FOR YOUR OWN AGENT
